Duct Temperature Sensor
Installation Instructions

The Duct Temperature Sensor can be used to measure the air temperature inside of a return or supply air duct.

This sensor has a useable measurement range of -20 to 140 degrees F.

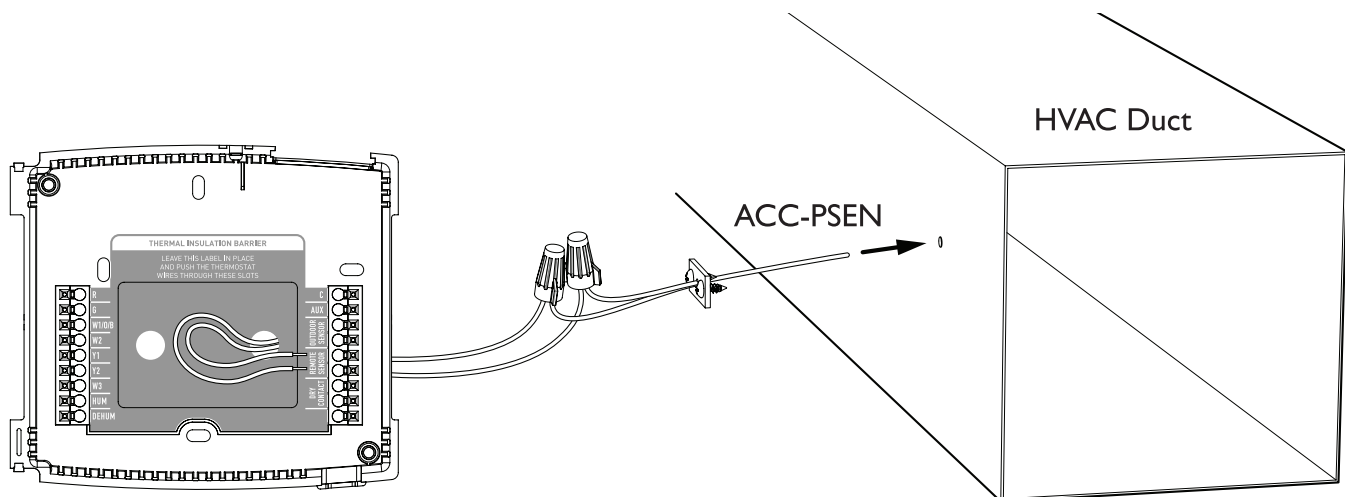

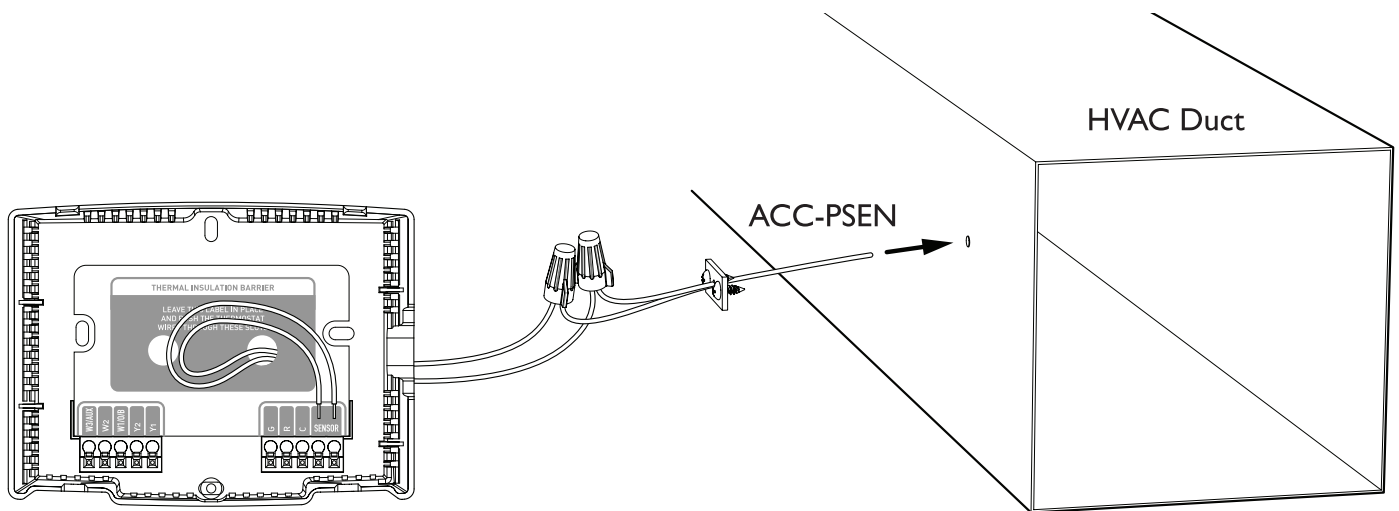

When used in a return duct, compatible thermostats can use the sensed air temperature for control.

When used in a supply duct, compatible thermostats can indirectly monitor the performance of the HVAC equipment and enable alerts / notifications when the performance doesn't meet values set by the user.

Use 18-22 gauge, 2 conductor, unshielded thermostat wire. Wire length should not exceed 200 feet.

If the cable from the sensor to the thermostat is to enter a duct, be sure to use plenum-rated wire.

Mount the sensor as shown and secure with the two supplied sheet metal screws.
